                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical company of sites expressing (II). (I) and (II) are useful for treating company of sites expressing (II). (I) and (II) are useful for treating company of sites expressing (II). (I) and (II) are useful for treating company of sites expressing (II). (I) and (II) are useful for treating company of sites expressing (II). (I) and (II) are useful for treating company of sites expressing (II) and (II) are useful for treating company of the polypeptide and polynucleotide sequences have applications in CC diagnostics, forensites, gene mapping, identification of mutations company to the produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human company to the invention.

CC Note: The sequence data for this patent did not appear in the printed company to the invention of the invention 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

```
The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 or In the specification). ABN15762 to ABN27552 encode the human ORFX proteins given in ABP00010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated of the contract of a medicament for treating a pathology associated disorder. ORFX-associated of the contract

protection or regeneration and treatment of lung or liver fibrosis,
reperfusion injury in various tissues and conditions resulting from
systemic cytokine damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              diseases, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         N.B. The sequence data for this patent did not specification, but was obtained in electronic for
